

**Topic:** The solar system

**Subject:** Nature and technology - group 3 (9 years)

**Description:**

The teaching is organized so there is an alternation between working in class, in groups, in pairs and individually. The purpose of the assignments is for the students to gain knowledge about the solar system

**Aims**

The aims are that the student can:

- explain what a solar system is.
- describe the difference between the two types of planets in our solar system.
- make a model of our solar system.
- use a model to list the names of the planets in our solar system.
- use Scratch to make a presentation of the planets.

**My mission** is to give students with reading and writing difficulties the opportunity to participate in teaching on equal terms with the other students. I will do this by changing the way I teach. So that it becomes more audiotive, visual and oral rather than focusing on reading and writing.
